

“Using Technology to Simplify Your Life” ©

## Web Site Design and Development, Including Content Management Systems

Over the years we have developed and designed some very complex projects as well as some simple web sites. We also seen some very interesting advertisements to say the least from claims of developing a web site for \$199 or less which is possible but never explained or informed of other hidden costs.

We strongly believe in full disclosure of everything no matter how small a detail is. This is the main reason why PCMACNERDS is so highly regarded for all the services and products that it provides including the many awards over the years.

Below are the top and most important stages in creating a brand new web site or updating your current one, including a content management system.

1. Meeting with one of our trusted and licensed technologists in order to go over the full scope of your project. We strongly believe that not only going over your project with a highly qualified member but explaining all technologies in simple terms is the only way to do so.
